## Search Notes

Dear KELLY:

Attached are the results of your search request regarding **CARRIED-FORWARD SERVICE  
UNITS AND COMMODITIZATION THEREOF**

Please let me know if you need anything further.

*Joan*

Joan Goodbody

**Abstract EP 1321039 A1**

Methyl iodide is employed as a soil fumigant for the effective control of plant pathogens, nematodes, bacteria and weeds. Methyl ioide is employed in substantially the same manner as is customary for use of methyl bromide, and is at least as effective as methyl bromide when used in comparable amounts.

**English Abstract:**

Methyl iodide is employed as a structural fumigant for the effective control of soil borne and structural pests such as wood rotting fungi, arthropods such as insects and arachnids. Methyl iodide is employed in substantially the same manner as is customary for use of methyl bromide, and is at least as effective as methyl bromide when used in comparable amounts.

**Alerting Abstract** EP A2

NOVELTY - System comprises of base station controllers BSCs (104,114) coupled to the mobile switching center MSCs (102,112) and each BSC is coupled to packet data network. Base stations (126,128) each coupled to a respective base station controller and support wireless

communications, and packet data communications routed between mobile unit and packet data network via a base station of base stations and a base station controller of base station controllers.

DESCRIPTION - An INDEPENDENT CLAIM is also included for base station controller and a method of operating the wireless communication system to service packet data communications between mobile unit and packet data network.

USE - Servicing packet data communications between mobile unit and packet data network.  
 ADVANTAGE - It efficiently allocates resources to support packet data communications that compensates for expansion and contraction of packet data traffic loading.

**Heat dissipating module for processors in laptop computer**

Patent Assignee: MICRON TECHNOLOGY INC (MICR-N)

Inventor: CATHEY D A

Patent Family ( 1 patents, 1 countries )

Patent Number	Kind	Date	Application Number	Kind	Date	Update	Type
US 5881298	A	19990309	US 1996707634	A	19960905	199917	B

**Alerting Abstract US A**

NOVELTY - An automatically operated switch (74) selectively disconnects cooling unit (72) from portable power source (62) to de-energize the cooling unit in a desired power saving mode during which processor (30) is operated. The switch selectively connects cooling unit to the power source to energize the cooling unit. DESCRIPTION - The switch de-energizes the cooling unit when power is supplied by the power source upon detection of power supply to processor by the sensor. The cooling unit and switch are fixedly attached to the portable computer so as to be the permanent components of the portable computer (20).

USE - For processors in laptop computer.

ADVANTAGE - Portable computer conserve power and prevents processor from being damaged by reducing clock frequency when cooling unit is disabled in power-saving mode.

			EP 1996304652	A	19960624		

#### Alerting Abstract EP A2

The power supply includes a circuit board having a number of power supply components mounted on it, and a module electromagnetic shield partially surrounding the circuit board, so as to shield some of the components. Metallic heat conduction paths are integrally disposed within the circuit board, and are substantially within a foot-print of selected components, for transferring heat from the selected components through the circuit board.

Compliant heat conduction pads are coupled between the circuit board and the module electromagnetic shield, for transferring the heat from the heat conduction paths to the module electromagnetic shield, such that the electromagnetic shield dissipates heat. The heat conduction paths and pads cooperate to form a compact structure for transferring heat from the selected power supply components to reduce the required volume of the power supply module.

ADVANTAGE - Allows power supply to fit within chassis of portable computer, therefore eliminating need for external module.

**Portable communication equipment in case with plasma panel - houses all necessary data transmission and processing peripherals in compartments with switchable mains-battery power unit**

Patent Assignee: WOEHLER G (WOEH-I)

Inventor: RATHMANN H J

Patent Family ( 2 patents, 15 countries )

Patent Number	Kind	Date	Application Number	Kind	Date	Update	Type
WO 1988005573	A	19880728	WO 1988DE38	A	19880127	198831	B
AU 198811861	A	19880810				198845	E

#### Alerting Abstract WO A

The case (10) incorporates an adjustable plasma panel display (12) in its hinged lid (14) which can be propped open (32). Compartments are provided for a diskette reader (20) and a printer (18) operated in situ, while a keyboard (24) can be extended from its recess (22) to which it is linked by a helical flex (26).

Another recess (28) houses a telephone handset (30) for an acoustic coupler. The **power unit** has a make-before-break **switch** between AC mains and DC battery supplies.

ADVANTAGE - Usefulness of microcomputer and its range of application are increased by robust structure with highly accessible input/output equipment and facilities for rapid connection to, e.g. larger computer or local area network, with password-accessible mailbox for storage and further transmission.

**Opening index price prediction method involves calculating price indicating cumulative value of discrete securities, for beginning of next regular trading session with respect to that during previous trading session**

Patent Assignee: BOSIC D H (BOSI-I); DELTA J (DELT-I); TEAGUE W (TEAG-I)

Inventor: BOSIC D H; DELTA J; TEAGUE W

Patent Family ( 1 patents, 1 countries )

Patent Number	Kind	Date	Application Number	Kind	Date	Update	Type
US 20030046215	A1	20030306	US 2001941491	A	20010829	200340	B

**Alerting Abstract US A1**

NOVELTY - The trading of discrete securities that occur outside a regular trading session, is monitored. The predicted opening index price of the security index, indicating the cumulative value of the discrete securities, is calculated for the beginning of the next regular trading session with respect to the closing index price at the end of the previous regular trading session.

DESCRIPTION - An INDEPENDENT CLAIM is also included for a computer program product for predicting opening index price.

USE - For predicting the opening index price of a security index including discrete securities.

ADVANTAGE - Scrutinizes the trade occurring outside the regular trading session to determine their impact on the stock index. By monitoring the **extended hours trading** of the specified securities included in the stock index, the trend of the specified sector of the stock market can be monitored efficiently.

**Trade filtering process for electronically traded stock market, involves comparing trade price associated with specific stock with known acceptable price to identify suspect trades**

Patent Assignee: BOSIC D (BOSI-I); DELTA J (DELT-I)

Inventor: BOSIC D; DELTA J

Patent Family ( 1 patents, 1 countries )

Patent Number	Kind	Date	Application Number	Kind	Date	Update	Type
US 20020156717	A1	20021024	US 2001841661	A	20010424	200309	B

**Alerting Abstract US A1**

NOVELTY - A trade price associated with each trade of a specific stock is monitored during a trading session and is compared with known acceptable price for that specific stock. Suspect trades are identified based on the comparison and are prevented from processing.

DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

1. Computer program product comprising recorded medium storing trade filtering program; and
2. Processor and memory.

USE - For filtering trades to identify suspect trades.

ADVANTAGE - Ensures that all trades are scrutinized and compared to administer-defined parameters to verify their authenticity and accuracy and prevents suspect trades reliably.

**International Patent Class (V7):** H03J-007/04**Abstract** EP 1458098 A2

In order to always maintain a frequency of an oscillator within a proper range, the frequency changes due to temperature and ageing, a method is disclosed in which the change due to ageing is calculated from past control information, and the frequency of the oscillator is corrected according to the change due to ageing. A storing unit records the past control information for the oscillator. A processing unit calculates the change of the frequency of the oscillator due to ageing from the past control information. Thereafter, the processing unit gives the oscillator new control information for correcting the calculated change due to ageing.

The present invention provides a method for providing alternate billing service to a user whose service is provided on a prepaid basis. The prepaid service includes a first billing source to pay for the service. An alternate billing source is also provided. The alternate billing source, which is different from the first billing source, is used upon the existence of a predetermined condition. Examples of predetermined conditions include the account balance of the first billing source dropping to zero, communications with predetermined telephone numbers, the user being in a predetermined geographic area, the time of day, or the day of the week.

**Abstract EP 1041149 A2**

The present invention provides neutralizing antitoxin directed against C.difficile toxins. These antitoxins are produced in avian species using soluble recombinant C.difficile toxin proteins. The avian antitoxins are designed so as to be orally administrable in therapeutic amounts and may be in any form (i.e., as a solid or in aqueous solution). Solid forms of the antitoxin may comprise an enteric coating. These antitoxins are useful in the treatment of humans and other animals intoxicated with at least one bacterial toxin. The invention further provides vaccines capable of protecting a vaccinated recipient from the morbidity and mortality associated with C.difficile infection. These vaccines are useful for administration to humans and other animals at risk of exposure to C.difficile toxins.

**English Abstract:**

Methods and apparatuses to provide services to people who wish to make connections for real time communication, such as live telephone conversation, chat, video conferencing, etc. In one embodiment, a method includes: an application receiving a representation of an object including a

reference to a remote system and a callee; the application communicating with the remote system via the reference to the remote system and the callee to determine a rendering of the object; and the application rendering the object identifying a state of the callee for accepting a request for real time communication, the object selectable to at least initiate a request for real time communication with the callee.

#### English Abstract:

Methods and systems consistent with the present invention provide a data processing system having a business object model reflecting the data used during a business transaction. Consistent interfaces are generated from the business object model. These interfaces are suitable for use across industries, across businesses, and across different departments within a business during a business transaction.

#### English Abstract:

A creator provides to one or more recipients an electronic note for display at the recipient's device(s) (352). If the creator updates information in the note (354), the note displayed at each the recipient is automatically updated (356). The electronic note can have an expiration time

associated with it that causes the note to expire automatically at the expiration time (357). The creator can alter the expiration time after the note has been provided to the recipients. The creator and recipients can exchange and update the note based on an agreement between them. Such an agreement can be embodied in an electronic contract that specifies the information in the electronic note the creator can update.

**English Abstract:**

Methods for providing an account rollover marketplace which includes providing a consumer interface with which consumers interact to pursue account rollovers, permitting each consumer to interact with the consumer interface to request to receive multiple rollover offers, and presenting multiple account rollover offers from different financial institutions to a particular one of the

consumers in response to that consumer requesting rollover offers. Also included are methods for alerting a financial institution of a transaction, which includes providing a consumer with an opportunity to enter application information for a rollover account application when that consumer selects one of a number of rollover offers, storing the information entered by that consumer, automatically sending an alert to the financial institution whose rollover offer that consumer selected when a completed application for that selected offer is received, and making the stored information electronically available to the financial institution to which the alert is sent.

	US	2000545562		20000407

**English Abstract:**

A data processing system is disclosed that can conduct a modified auction. A minimum value is determined for an item to be auctioned. Potential bidders are provided the opportunity to buy the rights to bid on the item (210). When the total proceeds from selling the rights to bid on the item become equal or greater than the minimum value for the item, an auction is performed for the item. In one embodiment, only those entities that purchased the rights to bid may participate in the auction, and the auction is designed to prevent the auction price from becoming too high.

Application	WO	2000US23999		20000831
Priorities	US	99387070		19990831

**English Abstract:**

A system, method, and article of manufacture are described for providing a self-describing stream-based communication system. Messages are sent which include data between a sending system and a receiving system. Meta-data is attached to the messages being sent between the sending system and the receiving system. The data of the messages sent from the sending system to the receiving system is translated based on the meta-data. The meta-data includes first and second sections. The first section identifies a type of object associated with the data and a number of attribute descriptors in the data. The second section includes a series of the attribute descriptors defining elements of the data.
